JOURNAL OF CRYSTAL GROWTH

www.elsevier.nl/locate/jcrysgro

Subject index

Apparatus
- for laser ablation deposition 169
- for study of nucleation and growth 223

Computer simulation
- of molecular beam epitaxy growth 112
- of silicon carbide growth 294
Constitutional supercooling
- of water solution 382
Convection 43, 71, 97, 410, 497

Device characterization
- biomaterials 554
- electronic materials 153
- heterojunctions 474
Diffusional control
- of lithium niobate 328
- of mercury manganese telluride 510
- of silicon germanium 270
Dissolution
- of naproxen 233

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
- chemical 497

Heat flow control
- of silicon 71
Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
- of dislocation 25
- of growth 36, 123, 153, 215, 223, 333, 382, 391, 441, 531, 554
- of interface control 36, 50, 395
- of nucleation 223, 354, 375, 441, 618
- of strain relaxation 31

Melt growth technique
- by Bridgman–Stockbarger method
- - of bismuth silicate 191
- - of gallium indium 590
- - of lead bromide 395
- - of mercury manganese telluride 510
- - of oxides 333
- by Czochralski method
- - of bismuth telluride 523
- - of bismuth titanate oxide 185
- - of gadolinium calcium oxide 453
- - of gadolinium silicon germanium 289
- - of lithium niobate 196, 328
- - of molybdenum disilicide 515
- - of silicon 50, 71
- by floating zone method
- - of germanium 497
- by micro-pulling down method
- - of bismuth silicate 317
- - of yttrium aluminum garnet 205
- - of yttrium silicate 361
- by uniaxial solidification
- - of silicon germanium 270
- by zone melting
- - of silicon germanium 270
Microgravity, growth under 92
- of cadmium telluride 97
- of germanium 497
Morphological stability
- of alpha lactose 368
- of interface 590
- of naproxen 233
- of rubidium hydrogen selenate 584

Nucleation
- of calcite 554
- of gallium nitride 245
- of silver selenide 153
- of tin and lead on aluminum 441
Numbers
- Grashof 43, 410
- Peclet 410
- Rayleigh 71, 410

Precursor
- for calcium phosphate 354
- for indium phosphide 253

0022-0248/99/$ - see front matter © 1999 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(99)00422-4

Solid growth technique
- by Ohachi method 136
Solution growth technique
- by flux method 323, 361
- by gel method 375
- by high hydrostatic pressure 563
- by low temperature method
- - of BSCCO 284
- - of naproxen 233
- - of potassium acid phthalate 457
- - of potassium dihydrogen phosphate 215
- by traveling heater method 92, 97
Stefan problem or moving boundary problem
- of lead bromide 395
Superconductivity materials, high T_c
- - of BSCCO 284
- - of NBCO 277
- - of SBCO 503
Superlattices, multilayers
- of III–V compounds 461
- of II–VI compounds 264
Surface energy, determination
- of anatase 223
Surface structure
- of gadolinium silicon germanium 289
- of ice 382
- of lactose 368
- of potassium dihydrogen phosphate 202
- of premelted film 427

Thin film growth, epitaxy
- by metalorganic molecular beam epitaxy
- - of aluminum nitride 31
- - of gallium arsenide 461
- - of gallium nitride 31
- - of indium arsenide 461
- - of indium arsenide phosphide 489
- - of indium gallium aluminum arsenide 607
- - of indium gallium arsenide 474, 481, 607
- - of indium phosphide 613
- - of manganese oxide 531
- - theory of growth morphology 112
- by vapor phase epitaxy
- - through chemical vapor deposition
- - - of diamond 163
- - - of gallium nitride 123
- - - of molybdenum sulphide 543
- - - of platinum 163
- - - theory of simultaneous etching and growth 98
- - through evaporation and condensation
- - - of behenic acid 575
- - - of cerium oxide 169
- - - of gallium nitride 253
- - - of silicon carbide 294
- - - of silver selenide 153
- - through metalorganic chemical vapor deposition
- - - of aluminum gallium indium phosphide 11
- - - of bismuth titanate 177
- - - of gallium arsenide 25, 36, 467
- - - of gallium indium phosphide 11
- - - of gallium nitride 1, 20, 245
- - - of NBCO 277
- - - of silicon 59,64

Vapor growth technique
- by chemical transport
- - of zinc selenide 43
- by chemical vapor deposition
- - of silicon 64
